For example "b/.c" means "a" is before "b" which is before "c" in the list. My company has a Portal Application which is based on old version of Delphi VCL and MySQL (ver 5.2). We need a Delphi component to support a simple GUI where the user selects a table of data from a grid and clicks the generate button and gets the data into the Delphi grid. I've searched the Embarcadero site and Google but cant find a suitable component. I'd appreciate a pointer to one if anyone has got one. Thanks A: Why reinvent the wheel? Have you tried using the Visual Database component from CodeGear? There is no reason you couldn't use that as the basis of your application, and then work with it from there. A: Answering your question regarding the Delphi Grid Control: In my opinion, the standard VCL grid control from Delphi is not perfect, and since you just need to display some records, you should first decide if you really need a grid control or if you can display them in a ListView with a bit of code. If you do decide to create your own grid, I would suggest you create a component based on the DevExpress GridControl and then use its own Cells to hold your data, since they are better designed, but can also be embedded in other controls. and for (3) any member of his household. 15 (2) The term "insured" means (1) the named insured; (2) his spouse; and (3) any relative of either, but only with respect to a private passenger automobile or trailer. 16 (3) Under Coverages A and B the term "relative" means (1) a son

EhLib 9.1 Build 9.1.028
