Phenotypic consequences of two null alleles at the *Drosophila* *vg* and vitellogenin genes. A *Drosophila* line carrying two alleles of the *vg* gene, null alleles at two of the three exons, exhibits behavioral and developmental abnormalities typical of uncoordinated mutants. The degree of developmental abnormality is related to the dosage of the mutated *vg* allele in homozygosis and in compound heterozygosity with a null *vg* allele. The mutant phenotype is not observed when vitellogenin (V 2edc1e01e8
