Despite this obvious benefit, I saw no real increase in productivity when using Photoshop Sketch on the iPad Pro. I have heard from many Photoshop Sketch users that they also believe they need more screen real estate on the iPad Pro. But for me, Sketch has failed to convince me that I would ever use it more frequently than the existing tools in such a way that I would make Photoshop Sketch the main tool for image creation. I might use the iPad Pro for the real thing. I would certainly use it for its intended purpose, a digital drawing pad. It simply seems that Photoshop Sketch was designed for those who have existing experience or interest in manipulating pen strokes in digital images. For those at the beginning of their artistic career, or for kids who have only been trying to draw since they were children, Photoshop Sketch will simply not spark their imagination as it is currently designed. And, frankly, even if Sketch functionality was complete and an ideal solution for the iPad Pro, I doubt I would be willing to pay the hefty \$99 to \$199 price tag. Why? Photoshop Sketch is not only not something I could imagine using at \$199. It would be something I would not consider buying for under \$100. Even with Apple's brand-new lack of profit margin for 2018, Photoshop Sketch seems like more of an experiment than a real tool for me. However, it will need a bit of refinement before it burns itself up, like some other apps that have seen release before their time. That said, I am positive about the iPad Pro and this digital drawing app. During the presentation, Apple focused heavily on how well-made the iPad Pro is. Even if you would not consider it for the professional photographer, the iPad Pro can probably function as a perfect drawing tablet. With a variety of tools included, from traditional brushes to raster and vector ones, your creativity will be sparked to an even greater degree. There is much potential for this device, particularly if Adobe keeps refining the sketching experience on the iPad Pro. For the future, the iPad Pro will definitely accelerate Photoshop and other creative processes.

These Photoshop benefits include:

Real-Time Corrections – Create your best image in less time with real-time corrections that focus on the edges and the art by adjusting contrast and exposure at the right moment.

Previously, you may have released a photo only to discover a deep red creep that appears in the fine details. With real-time corrections, you can fix it right away by entering a single point in the retouch menu.

Auto Pixel Pushing – Use Automatic Pixel Preview to automatically push pixels in high-contrast

areas and correct color balance in low-light situations. This feature helps ensure that all areas of the artwork are correctly exposed and tonal values are accurate.

Keep Transforms Pinned – Easily see when a transform will occur so there are no surprises when a layer transforms into a different size. This helps prevent the awkward situation of accidentally destroying the transform and starting over on a special effect.

Lastly, the new feature hotspot is a new layer option that lets you highlight areas of an image to easily color-match, retouch or remove digital weather effects. The resized image is then placed as a new layer that contains a hotspot that you will be able to edit later. The new tool takes advantage of Adobe Sensei, which can detect the corner or center of a photo. It detects the exact location on a photo where it thinks that the hotspot should be placed. Using a slider tool, you are able to control the size of the hotspot. The new selection handles in the new window toolbar allows you to easily select individual objects, text and logos. Use these selection handles to crop, copy, add text, and fill the foreground with a different color. This is the third major update to the selection tools, after the selection handles have been redesigned in 2016, and the updated handle shapes were introduced in 2017.
