Khuda Gawah on Flixter Movie Download For Hindi.Q: Handling POST request while keeping POSTMapping i have been developing a new web API, that will handle POST requests in an event-driven fashion. Simply put, my actions will do something like this: myClient.ProcessRequest(request, context); Now the action for every request i receive might go something like this: public override async Task ProcessRequestAsync(HttpContext context) { var ret = await doSomeWork(); // do this if we did not succeed if (ret == null) { var response = (HttpResponseMessage)context.Response; // show the error response.StatusCode = 500; response.Content = new StringContent(error); return; } // do this if we did succeed var result = await doSomeOtherWork(); // do this if we did not succeed if (result == null) { var response = (HttpResponseMessage)context.Response; // show the error response.StatusCode = 500; response.Content = new StringContent(error); return; } // do this if we did succeed response.StatusCode = 200; response.Content = new StringContent(result.ToString()); } As you can see, we handle the success cases differently. With a little help of a class I created some CustomDictionary that is used for a
